HEX FLANGE PRODUCT FOR FRAME BOLTING
GRADE 8 HEX FLANGE PRODUCT FOR FRAME BOLTING

All Items Phosphate & Oil

Auveco flange bolts and locknuts form a strong and dependable fastening system that substantially cuts truck assembly, maintenance and repair costs. The flange bolts are made of IFI 111 industry standard specifications, and when used in conjunction with the flange locknuts form a 150,000 P.S.I. tensile strength fastening system equivalent to SAE J429, Grade 8 industry standard specification. Flat washers and lock washers are not needed with the flange bolts. Also our flange fastening system reduces the need for costly hole preparations such as deburring and countersinking.

METRIC ITEMS

J.I.S. Small Head Cap Screws

J.I.S. B 1180 • Steel • Heat Treated • I.S.O. Class 8.8 • Zinc Plated

J.I.S. fasteners have a smaller hex dimension (across the flats) than DIN or ISO metric fasteners. They fit in those tight spots where the hex of an ISO or DIN fastener is too large. J.I.S. fasteners are OEM equipment on many GM and Japanese import car applications.

AUVECO THIN SHEET NUTSERT® INSERTS

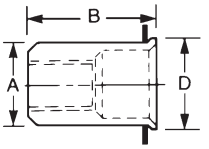

U.S.S., S.A.E. & Metric -Steel & Aluminum

Threaded Inserts For Thin Material

The Auveco Thin Sheet Nutsert has been designed to provide a highly efficient method of securing threads from one side of the work in materials generally too thin to support threads. Its performance has been proven in plastic, aluminum, mild steel and fiberglass withstanding high loads without vibrating or loosening under extreme operating conditions. The Auveco Thin Sheet Nutsert is a tension fastener with high pull out, insuring no rotation or vibration where a cover plate is used. The system's unique blind tooling installs TSNs at consistent rates using unskilled labor.

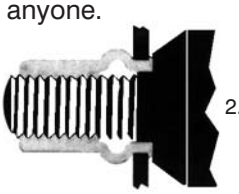

How It Works

The Thin Sheet Nutsert, held securely by the tool, is placed into a prepared hole. Upon the tool's actuation, the threaded portion is pulled until the fastener's wall collapses radially outward, clinching it tight against the sheet. The tool is withdrawn, leaving the Thin Sheet Nutsert ready to receive a bolt or screw. This complete operation takes only a few seconds and can be performed by anyone.

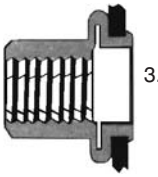

1. Insert TSN into prepared hole.

2. Engage the tool

3. TSN installed With standard head configuration

Strength Tests: Torque Strength -With an attaching part over the Thin Sheet Nutsert, offering a bearing surface, the TSN will remain intact past the point of the screw or bolt breaking (head torqued off). In almost all cases the threads of the TSN will remain undistorted and serviceable -an exception to this statement is when an extremely high tensile bolt is used.

Steel: 1010 Low Carbon Steel, Type 11 Class 3 with Zinc Plate, Clear Chromate
Aluminum: Aluminum Alloy 5056, Plain Finish, Metric Class 6H, U.S. Class 2B

To Set Nutserts, Use Tool 11805 & Conversion Kits Listed On Page 92.

Sec. 9 LARGE FLANGE THIN SHEET NUTSERT® INSERTS

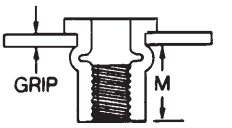

U.S.S., S.A.E. & Metric -Steel & Aluminum

The Large Flange system provides captive threads in materials too thin to independently support threads, or where costly tapping operations are to be eliminated. The Large Flange fastener can be used as a rivet to join materials that will ultimately have a separate component attached.

Materials: Low Carbon Steel, Zinc Plated
(Metric: Zinc & Yellow Plated)
Aluminum Alloy, Plain Finish

Typical

To Set 8-32, 10-24 and 10-32 Large Flange Nutserts, use tool 11805 and conversion kits listed on page 92. 1/4”-20, 5/16”-18 and 3/8”-16 Large Flange Nutserts require a pneumatic tool for installation. They can **not** be set with 11805.

NUTSERT® INSERTS
U.S.S. & S.A.E. THREAD

The Auveco Nutsert® was developed to offer both the production-oriented designer and engineer a unique and versatile anchor nut-type insert for high-speed installation. This Auveco system gives the designer the option to design for **blind** or **open** applications, eliminating and simplifying his design problems.

The Auveco Nutsert® system provides a cost-saving method of installing clean, load-bearing steel threads in castings, fiberglass, fiberboard, plastics, wood or almost any ductile material more than .030" thick.

A simple hand tool installs the Nutsert®...it is ready for use in seconds… no finishing is required after installation.

Auveco Nutsert's® advanced design offers unlimited grip range in a minimum of sizes...inventory is minimized to one body dimension per thread Size; ideally suited for blind...buried… and through holes. The ingenious "taper-lock" principle locks-in the Nutsert® preventing spin or twist; installs in flat or curved surfaces and is self-tightening with repeated use. The unique design of the installation tool eliminates marring of the parent material surface.

Material: Mild Steel, Cadmium Plated

Minimum Grip: .030"

HELI-COIL® THREAD REPAIR INSERTS & KITS

For Repairing Stripped Or Damaged Threads

Heli-Coil® has the most effective and universally accepted method of thread repair. Heli-Coil® Inserts quickly and permanently restore stripped, worn or damaged threads to their original size and condition.

Easy to use… just 1. Drill 2. Tap 3. Install
Now you're back to the original size and the original size fastener can be used.

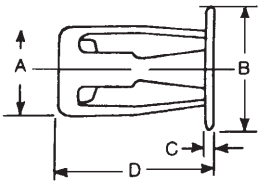

When threads become stripped, worn or damaged for any reason, the strength and reliability are greatly reduced. When this happens on critical threaded assemblies, cars, and other types of equipment, it may become unsafe to operate.
These potentially dangerous situations are eliminated when the damaged thread is repaired with a Heli-Coil® screw thread insert. The Heli-Coil® threaded insert provides stronger, more reliable threads than the original tapped hole and at the same time eliminates the possibility of thread wear, seizing and corrosion.

WASHERS

Nord Lock Vibration Proof Lock Washers

For Use With Grade 5 & Grade 8 Bolts
Zinc & Yellow Chromate Plated

These washers have cams or wedges on one side, with a lead angle greater than a thread angle, and radial teeth or ribs on the other side. The washers are installed cam face to cam face. When tightening the fastener to preload, the teeth penetrate and seat against the joint material and the nut and/or fastener head. When subjected to vibration the interacting cams create a wedge action which prevents the fastener from vibrating loose.

Material: Carbon Steel
Hardness: Through Hardened: Min. 44HRC, Max. 51 HRC

TERMINALS

Moisture Resistant Nylon Insulated Butt Connectors

Protects electrical connections from corrosive environments - road chemicals, salt spray, etc. Insert wire and crimp twice (electrical and mechanical) at each end - no need for heat or chemicals.

13684	16-14 Ga.	10
13685	12-10 Ga.	10

Heat-Shrinkable, Solder-Type Closed-End Connectors And Terminals

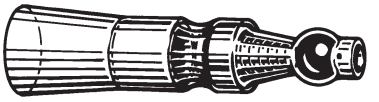

These terminators consist of a heat-shrinkable thermoplastic sleeve containing a spiral wound copper insert that is fitted with a prefluxed solder band. The unique combination of wire sizing and controlled soldering technology provides dependable electrical termination of as many as 10 wires of different sizes in a single connector.

Easy installation: Insert stripped wires into the terminator, then twist slightly. Twisting causes the copper insert to tightly grip, compress and hold the wires together. Apply heat. The tubing shrinks and the solder melts and flows through the copper insert into the center of the termination area, leaving the wires soldered together. The result is a reliable, insulated termination.

SPOOLED FUSIBLE LINK WIRE

The lower the gauge number, the thicker the wire (i.e. 10 ga. is thicker than 16 ga.)

A fusible link is a special section of low tension cable installed by an OEM and designed to open a circuit when subjected to extreme current overload. Its purpose is to minimize wiring system damage when such an overload accidentally occurs in those circuits protected by the fusible link. A short circuit causes the fusible link to act as an element in a "slow-blow" fuse. A fusible link is not intended to be used in place of a fuse but only where a fuse cannot be economically employed. Our fusible line wire meets the requirements of SE J-156 and the insulation has the characteristics as listed for EAE, SE J-1128 Type SXL. The vehicle manufacturer should be consulted about questions on fusible link length and size. General practice has been for a fusible link to be 4 gauges smaller than the circuit wire. Example: if the circuit wire is 12 gauge, use a 16 gauge fusible link. Final determination should be based on O.E.M. application.
Note: Extreme care should be taken to always replace a fusible link with the same gauge and length as installed by the manufacturer.

Made In U.S.A.

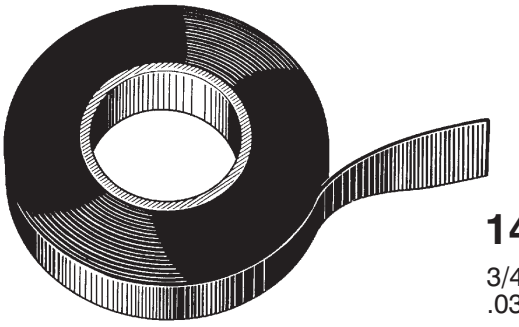

.007" Thick x 3/4" Wide x 60 Ft. Long

16527 Unit Package: 5 Rolls
16578 Unit Package: 15 Rolls

General purpose vinyl insulating tape with excellent resistance to abrasion, moisture, alkalies, acid, copper corrosion and varying weather conditions. Can be used as a primary electrical insulation for all wire and cable splices rated up to 600 volts. UL listed and CSA certified "Insulating Tape".

Linerless Self-Bonding Rubber Tape

Replace heat shrink tubing with a safe, tight, long-lasting seal that withstands temperature extremes from -50° to 300°F. No heat guns or open flames needed. No paper liner to mess with.

14389

3/4" x 15 Ft.
.030" Thick

UNIT PACKAGE: 1 Roll

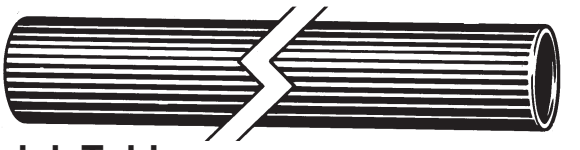

Self-bonding rubber tape can be used to replace heat shrink tubing in most automotive applications. It is stretched when applied and retains its elasticity to ensure a tight seal at all points. There isn't a possibility of a leak due to unevenly applied heat as can happen with shrink tubing.

The tape is unaffected by salt spray and common automotive fluids. As long as it is stretched when it is applied, it will not unravel after application due to its self-bonding characteristics.

14474

Blade Type Fuse Tap

1. 2. 3.

The blade type fuse tap is made of sturdy brass and is engineered for quick connect and disconnect of accessories such as C.B. radios, hand-held lights, etc. Installation can be completed in three steps.

1. Use a test probe to locate the “hot side” of the circuit in the fuseblock. Then snap the tap over the corresponding “hot side” blade of the fuse. Insert the fuse into the fuseblock.
2. Crimp one end of an in-line fuse holder (with the fuse installed) to a fully insulated nylon .250" female quick-connect terminal. Attach the other fuse holder lead to the accessory wire.
3. Complete the connection by sliding the female quick-connect terminal onto the protruding tab of the tap.

Routing Clips

A quick, economical method of fastening wires, tubes, hoses or rods from 1/4" to 1" diameter to metal, plastic or any other surface ranging from 1/32" to 1/8" thickness. Clips are molded of durable black nylon plastic. They snap into 1/4" diameter holes and are held firmly in place by flexible “snubber tips” which compensate for variation in wall thickness.

THE RIVET CONNECTION

The "*Easy to Choose - Easy to Use*" Rivet Program
"*The Packaged Quantity You Want*"

The Rivet Connection offers a rivet program whose time has come. The unique flexibility of the merchandising concept makes it the ideal program. While it's designed for the retail/walk-in business at the jobber store, IT IS ALSO THE PERFECT SYSTEM FOR THE MOBILE DISTRIBUTOR THAT CALLS ON AND SERVICES BODY SHOPS DIRECTLY.

The program is built upon our RC Paks which are 56 popular parts packaged in one-price clam shells. Every RC Pak is attractively labeled with a part number, number of pieces, O.E.M. numbers, all the necessary dimensional specifications and is UPC bar coded.

The RC Paks are merchandised on two panel assortments - part number **RC103**. The panels give you the coverage you need in a system with a premium on space. Merchandising rivets has never been easier. The panels come "pre-dressed" with the RC Paks already hung in place. Simply lift a panel out of the shipping carton and mount the panel on a pegboard wall or gondola with the attached hooks. It's that quick and easy.

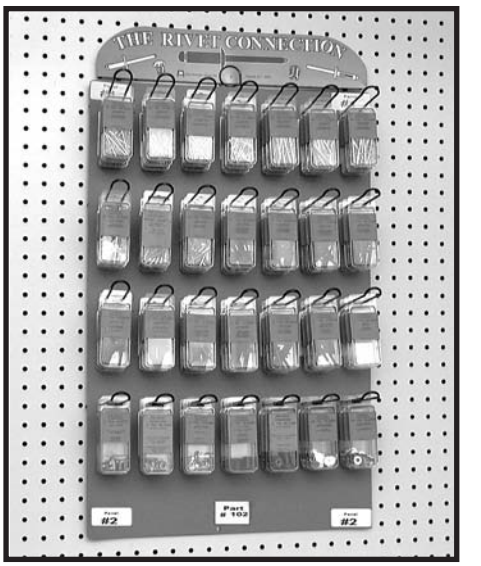

Each panel measures 16" Wide x 28-1/2" High and accommodates 28 different items. The looped product hooks are 4-3/4" long and will hold up to 5 RC Paks. Back-up labels with UPC bar codes make re-ordering replacement merchandise a snap while panel location information printed on each RC Pak label makes restocking just as quick and easy.

For complete information on The Rivet Connection program including individual RC Paks, request a Rivet Connection 4 page flyer when you place your next Auveco order.

POP® MULTI-GRIP BLIND RIVETS

Functions In A Wide Range Of Material Thicknesses

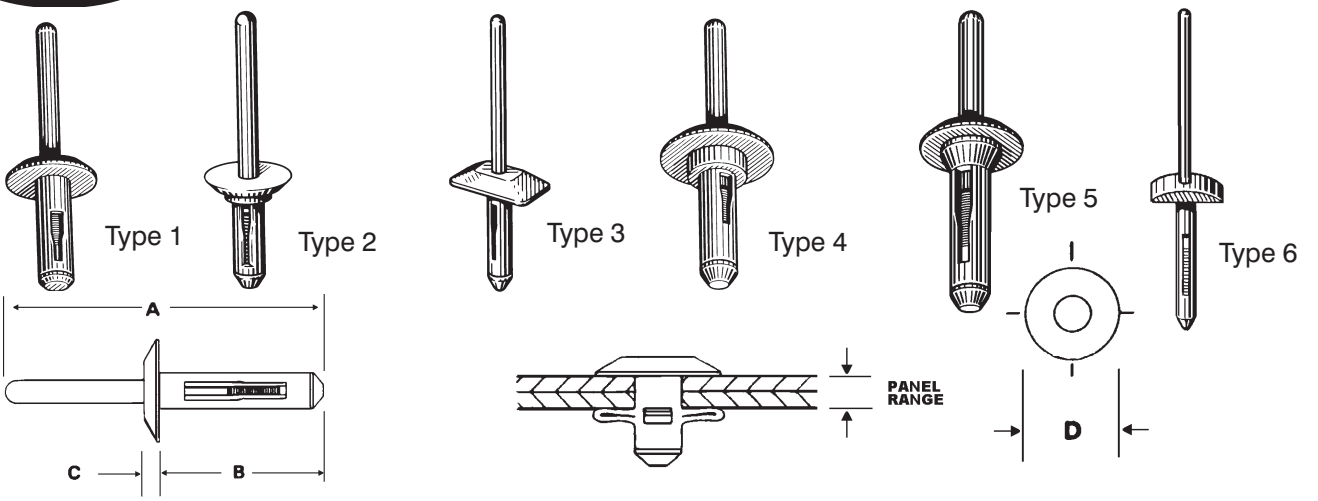

The Multi-Grip rivet will serve in applications where solid and soft materials and thicknesses normally require several rivet sizes. Oversize, irregular or misaligned holes are automatically compensated for by the self-adjusting hole-filling capability. The mandrel head is retained in the rivet body, forming a tight, weather resistant seal.

AVEX® BLIND RIVETS

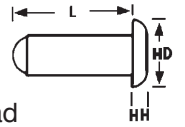

What Makes Avex® Different...And Better?
The Avex® rivet adds important… and exclusive...features to those offered by ordinary blind rivets. The unique advantages designed into the Avex® rivet allow for its use:

In wide-tolerance holes. Since the rivet can expand up to its own head diameter, accurate hole sizing or alignment is not necessary.

To pull sheets together. The extraordinary rivet tail expansion automatically effects superior clamp-up action on the parts being assembled.

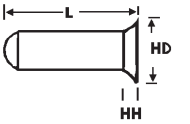

Over a vast range of thicknesses. The "dubble-bubble" expansion feature offers the capability to fasten securely in both thick and thin grip ranges with a single length rivet.

While providing a sealed stem. The rivet material flows both behind and in front of the mandrel insuring a positively retained and sealed stem.

Monobolt Nosepiece

19622 For 3/16" Monobolt
13825 For 1/4" Monobolt

UNIT PACKAGE: 1

The System
Blind Installation -The single side installation feature of the Auveco Monobolt System allows one operator to produce high quality structural joints in seconds. Use of the Monobolt power tool does not require special skill or training, because the tool completely controls the installation cycle.

Multi-Grip One size Monobolt fastener will function effectively in a wide range of material thicknesses (Example: .080" to .375"). This versatility decreases the potential for production errors and reduces fastener inventory requirements.

Uniform Clamping Action
Monobolt fasteners are engineered to draw materials together by developing positive clamping action.

And Its Advantages
Structural Fastening An installed Monobolt fastener yields high shear and tensile values. Conventional fasteners can be replaced by Monobolt without compromising structural requirements.

Positive Stem Retention: At the completion of the installation cycle, the stem is mechanically locked into the Monobolt shell, creating a vibration-proof joint of assured structural quality.

Flush Break Stem: Within the specific grip range for each size, Monobolt fastener, the stem is designed to break flush with the low profile head. Secondary finishing operations, such as grinding or milling, are not necessary to achieve good product appearance.

Complete Hole Fill: During installation, the Monobolt shell expands into 360° contact with the walls of the parent material. This feature, in conjunction with positive stem retention, produces weather resistant joints.

Quiet, Safe Installation: The Monobolt System, operating at 85db ("A" Weighted), complies with OSHA regulation governing plant noise levels and operator safety

How It Works

1. The Monobolt fastener is loaded into the nose of the placing tool and inserted in a prepared hole. As the tool is actuated, the pulling jaws grip the Monobolt stem.

2. An axial pull draws the stem through the shell, expanding it radially. During this phase, the hole is completely filled and work pieces are drawn together.

3. When the stem reaches a pre-determined position within the Monobolt shell, it separates flush with the head profile regardless of work piece thickness. Simultaneously, the stem section remaining in the shell is mechanically locked in place by the Monobolt tool.

12087

Gun for setting Monobolts and conventional Avex and Stavex rivets.

Requires Nose Pieces 19622 and 13825 to set Monobolts.
Will not set "Peel-Type" rivets.

AuvecoPak AP256 RETAIL MERCHANDISER

NOTE: The AuvecoPak part number is the same as the standard Auveco part number with an "AP" prefix. Thus AP11146 is the AuvecoPak version of 11146.

Note: Gondola Is Not Included

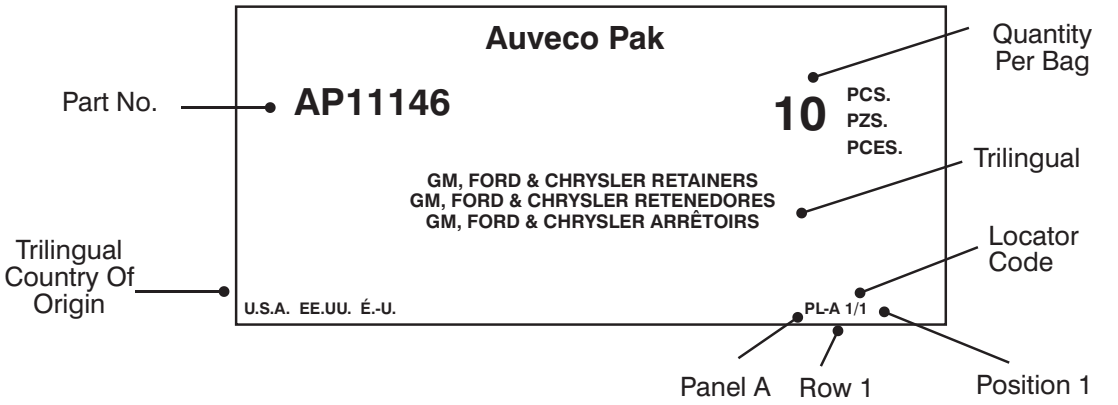

Refer to the color pages in the front of the catalog for a better view of the merchandiser and individual bags.

The **AuvecoPak AP256** provides a Jobber with 256 of the fastest moving, most popular automotive body hardware and specialty fastener items in a **one-price bag** all on one 4-panel merchandiser. Each panel contains two bags each of 32 part numbers per side for a **total of 512 bags**. The attractive green AuvecoPak bags feature eye-appealing, contemporary graphics with all the necessary application and descriptive information in **trilingual verbiage** (English, Spanish and French-Canadian).

Initial set-up is as easy as 1-2-3 since the panels come **"pre-dressed"** with the AuvecoPaks already in place. Simply position the top and bottom brackets on a gondola. Insert the panels into the brackets and you're ready for business. An individual panel measures 6-1/2"(wide) x 17-1/2" (front to back) x 44-1/2" (high). The AuvecoPak AP256 4-panel merchandiser fits on a 48" x 48" gondola or on any pegboard wall. **A gondola is not included as part of the merchandiser.**

Re-order information, including the AuvecoPak part number and a **UPC-A bar code**, appears on the panel back-up boards beneath each hook. Restocking the merchandiser is also quick and easy since the AuvecoPak bags contain locator codes that identify their specific location on the panels.

GROMMETING & TIRE VALVES

Flexible Serrated Polyethylene Grommeting

(Natural Color)

Grommeting is primarily used to protect wires and cables from sharp panel edges. Wires that are routed through knock-outs or over sharp edges need to be prevented from chafing against those edges. Grommeting can also be used to protect the edges of glass, sheet metal, wood panels, or other sheet-form materials. Depending on the panel thickness of the application, grommeting may grip tightly by itself—if not, a touch of epoxy will keep it in place.

Door Hinge
Pin & Bushing
Repair Kit

UNIT PACKAGE: 1 Kit

ISO9001: 2000 CERTIFIED

Why bother with the hassle of cutting and grinding off a worn door hinge and welding on a new one when you can repair the bad hinge in a fraction of the time?

With our new Door Hinge Pin & Bushing Repair Kit, fixing sagging doors caused by worn hinges due to pin failure is quick. It's easy. It works. And you don't have to repaint the welded heat flash area.

Each kit is designed to repair one hinge and contains two pins made of zinc plated machined cold rolled steel, two self-lubricating brass alloy bushings, two zinc plated nylon insert lock nuts and a zinc plated washer.

Here's how it works:

1. Remove the door from the truck body
2. Remove the original equipment pin and bushings
3. Install the bushings into the hinge holes
4. Install the longer pin into the top hinge hole
5. Thread on the lock nut
6. Install the shorter pin into the bottom hinge hole
7. Place the washer and a nut on the shorter pin
8. Tighten the nut to pull the pin into place.
9. Slowly tighten both upper and lower lock nuts
10. Reattach the door to the truck body

Detailed instructions are included with the kit.

Truck Door Hinge Spring

Not Actual Size

14555

Right (Passenger's) Side
5-3/4" Long

UNIT PACKAGE: 2

Now you don't have to replace the entire door hinge assembly on Ford trucks when only the spring is broken. You eliminate removing, replacing and realigning the door.

This OEM equivalent spring has been redesigned to make installation easier.
The whole procedure is now this easy:

1. Remove the original spring.
2. Place the new spring into the upper slots of the hinge.
3. Use a wrench to twist and drive the spring into place. You may need a light hammer to tap the spring into the lower slots.

Door Hinge
Bolt & Bushing
Repair Kit

UNIT PACKAGE: 1 Kit

Why bother with the hassle of cutting and grinding off a worn door hinge and welding on a new one when you can repair the bad hinge in a fraction of the time?

With our Door Hinge Bolt & Bushing Repair Kit, fixing sagging doors caused by worn hinges due to pin or bushing failure is quick. It’s easy. It works. And you don’t have to paint the welded heat flash area.

Each kit is designed to repair one hinge and contains one zinc and yellow dichromate plated grade 8 bolt, two self-lubricating brass alloy bushings, one zinc plated spin lock nut and one zinc plated internal lock washer.

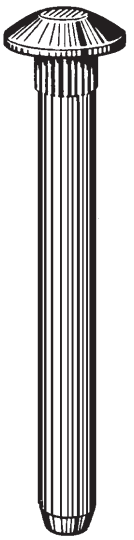

Here’s how easy it is:

1. Remove the door from the truck body.
2. Grind or cut off the end of the pin at the peaned end.
3. Remove the old pin and bushings.
4. Install the bushings into the hinge holes.
5. Place the washer on the bolt and install the bolt into the bushings.
6. Thread the nut onto the bolt and tighten.
7. Reattach the door to the truck body.

ISO9001:
2000
CERTIFIED

Detailed instructions are included with the kit.

HOSE CLAMPS

Norma Torro (European Style) Hose Clamps

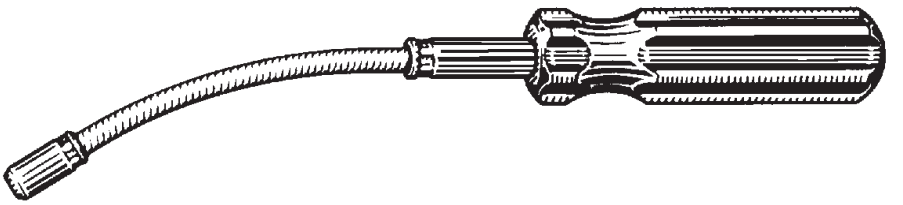

DIN 3017 • Stainless Steel Band & Housing • Zinc & Yellow Steel Screw

Unique off-set non-welded design of the housing provides resistance to over-tightening damage to the hose. The short housing saddle gives a smooth underside ensuring high sealing efficiency. These clamps are original equipment on both domestic and import vehicles. They are particularly suited for fuel, vacuum, water, emission and heater hoses and can be used with silicone hoses.

ENGINE MANIFOLD REPAIR KIT

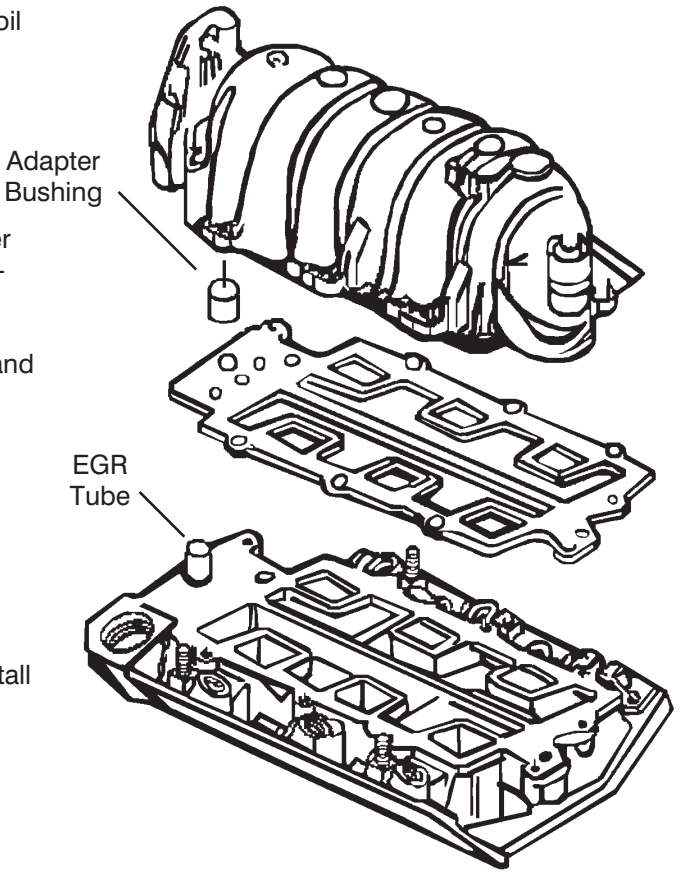

STOP EXCESSIVE COOLANT CONSUMPTION OR LEAKAGE!!!!

20574
Engine Manifold
Repair Kit

UNIT PACKAGE: 1 Kit

2003 - 1995 GM vehicles with 3.8 L series 2 engines (VIN K - RPO L36) have been experiencing excessive coolant consumption or coolant leakage near or under the throttle body and intake manifold. This is caused when the EGR tube on the lower manifold degrades the composite material of the upper intake plenum around the passage area between the two part manifold. Once the composite material is degraded, it becomes porous and allows the coolant areas on either side of the EGR passage to leak coolant either internally or externally. If it leaks internally into the intake manifold and then the cylinders, it can result in "hydro-lock" of the engine. A simple coolant leak has resulted in a major problem that as best requires changing the spark plugs and oil in order to start the engine. That doesn't correct the cause of the problem though.

Until now, the solution has been to replace the upper plenum and lower manifold at a retail cost of $1200 - $1400 for parts and labor. Yet that alone does not correct the root cause of the problem. Our **20574 repair kit** offers an inexpensive but highly effective and permanent solution. Here are the steps involved:

1. Remove the upper intake manifold.
2. Remove the EGR tube from the bottom plenum.
3. Install our new EGR port tube.
4. Use epoxy supplied with our repair kit to install our new adapter bushing in the upper plenum.
5. Reinstall the upper intake manifold. (Detailed instructions are included with the kit)

As an added benefit, the smaller diameter of our EGR port tube creates an air space between the repaired (with adapter bushing) upper plenum and the new EGR port tube. This air space insulates the composite material of the plenum from further damage.

Prep Pen Spot Sanding Pen With Glass Fibers

Part No. 18335

Now you can thoroughly clean rust, dirt or wax from any tight corner, crevice or hard to reach spot with 20,000 glass fibers in a pen point. The fibers are finer than human hair yet stronger than steel when it comes to cleaning power.

Sand paper can be too rigid to directly contact and clean the contours of inside edges. Thus conventional sanding only cleans the high spots. The Prep Pen's glass fibers can be extended out (by turning) to ensure even the smallest recesses get cleaned.

The Drill-Out Broken Bolt Extractor is excellent for removing broken bolts and studs without damaging the threads in the hole. The drill body is manufactured using the finest quality hi-speed steel. The collet is produced from hot die steel, using the finest steel of its type. All Drill-Out Broken Bolt Extractors are made with a precision ground 118° left hand cutting self-centering point, and are heat treated for toughness.

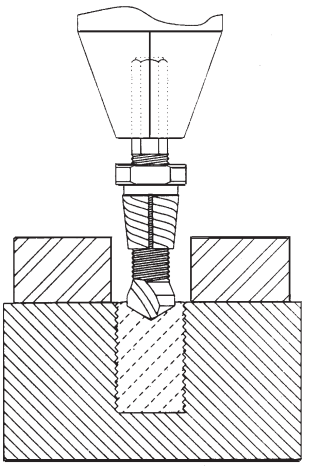

FIG. 2

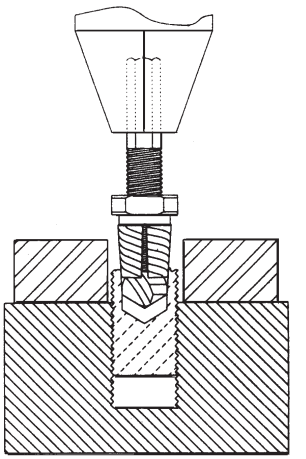

FIG. 3

Fast & Easy To Use.

Always Use Protective Eye Wear When Drilling.

1. Place the Drill-Out tool into an electric drill and set for reverse operation. Move the collet up to the chuck. Note: when the bolt is broken below a flange attached to a casting, reverse the collet as in (Fig. 1.)

2. Making sure the drill is set in reverse, place the tip of the Drill-Out on the center of the broken bolt and begin drilling. Do not allow the collet to move down towards the tip while drilling. If so, thread the collet back towards the chuck. Drill just deep enough to start a hole (approximately 1/16").

3. Make sure the hole is started on center of the bolt. If you reversed the collet in step 1, change it back at this time. Continue drilling. Stop just before you reach the front of the collet. Do not let the collet touch the end of the bolt. (Fig.2)

4. Remove the Drill-Out tool from the broken bolt. Move the collet down towards the tip so that 2 threads are showing. Bring drill up to speed and plunge it into the hole. The collet automatically engages and extracts the broken bolt. (Fig.3)

Hole Saw Kit

The five most popular hole saw sizes plus one pilot drill packaged in a high impact resistant plastic case. The kit contains:

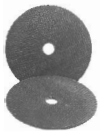

Sizes	7/8"(22mm)	1-1/4"(32mm)
	1"(25mm)	1-1/2"(38mm)
	1-1/8"(29mm)	1/4" Pilot Drill

Each saw is constructed with a high speed M3 cutting edge welded to a resilient alloy back. The saws will cut a 1-3/8" deep hole in any material that can be cut with a hacksaw blade—from wood and plastics to harder materials such as stainless steel. The patented feature of our hole saws is an arbor that is permanently attached to every unit.
For best results, use a 1/2" drill, chucking directly to the stem. 1/4" and 3/8" drills can chuck directly to the stem of the pilot drill (not recommended for sawing holes over 1").

O.E.M. INTERCHANGE BY MANUFACTURER

The O.E.M. numbers listed in this interchange are cross referenced to the closest equivalent Auveco part. In some instances, the parts are not identically the same. There may be slight differences in the finished, length, washer O.D.: however, the Auveco part is designed to service the same application.

This interchange is not listed in strict numerical order (from the lowest number to the highest number.) Rather it is arranged in numerically ascending order from the left regardless of the number of digits in each O.E.M. number. Thus every number that begins with a 1 is listed before any number that begins with a 2. You should key on the first four digits to locate the number. For example, 1121865 is located before 11229 and after 11189734. OEM numbers that begin with a letter precede OEM numbers that begin with a numeral.

O.E.M. INTERCHANGE BY NUMERICAL ORDER

The O.E.M. numbers listed in this interchange are cross referenced to the closest equivalent Auveco part. In some instances, the parts are not identically the same. There may be slight differences in the finished, length, washer O.D.: however, the Auveco part is designed to service the same application.

This interchange is not listed in strict numerical order (from the lowest number to the highest number.) Rather it is arranged in numerically ascending order from the left regardless of the number of digits in each O.E.M. number. Thus every number that begins with a 1 is listed before any number that begins with a 2. You should key on the first four digits to locate the number. For example, 1121865 is located before 11229 and after 11189734. OEM numbers that begin with a letter precede OEM numbers that begin with a numeral.

FasTrack™ Cost Recovery System

Auveco's FasTrack is a user-friendly program designed to assist collision repair shops in recovering the cost of the trim clips, moulding clips, and fasteners used in body repair.

Previously, the cost of fasteners used in collision damage repair was often an expense that was not recovered by body repair shops. As the insurance companies considered these items "a cost of doing business", they were reluctant and usually refused to pay claims for these items without an itemized invoice for each vehicle repair order.

Many collision repair technicians were unwilling to take valuable time away from actual repair to prepare these detailed invoices. As a result these items were often not invoiced and ultimately cost the body shop hundreds of dollars a week in lost revenue.

With the help of FasTrack, these once profit draining parts can now become a source of additional income for your collision shop.

The major benefit of the FasTrack system is its **ability to create the accurate and detailed invoices** required by the insurance companies. Invoices can be customized to include the collision shop's logo for a more professional appearance. Once created, this logo will also appear on the FasTrack main menu screen.

FasTrack includes an **extensive database of every Auveco part commonly used in auto body repair.** The FasTrack database includes detailed information about every item as well as applicable OEM numbers and OEM list pricing. **FasTrack is the only software of this type offering OEM based pricing!** Auveco strives to be on the cutting edge of the body repair business. As new products are added to the already extensive Auveco product line, they are also added to the FasTrack database through **timely updates,** which are made available to active licensed users.

FasTrack is equipped with an **inventory tracking system** that allows the collision shop manager to enter initial inventories and to set up reorder points for replenishing stock in a timely manner. This system can also be used to track and invoice non-Auveco parts used in your body shop, such as adhesives, and cleaners.

Want to track your custom items? FasTrack lets you print your own bar code labels on standard label stock!

FasTrack also has a number of **built-in search utilities where** you may quickly look up any part by Auveco number, the OEM part number, your reference number or by any keyword related to the part. There are also many reports available through FasTrack. Besides the printed invoice, **there are reports to track profitability, sales by technician, inventory reports, sales by insurance company, inventory by location, etc.**

The FasTrack software includes utilities that will allow almost any Windows compatible printer to produce **custom bar code bin labels.** Once an item is entered into the FasTrack system, bar code labels can be printed onto standard size label stock by simply going to the database and indicating the part numbers that require labels. You may also print labels for your own unique numbering system or any items you have added to the FasTrack database.

Through the use of the **FT-SCAN portable data collection device, your technicians can now enter FasTrack invoicing information quicker than ever.** The FT-SCAN (available for an extra cost) is a powerful laser-scanning device built into a hand-held computer. The technician simply scans the repair order number his technician ID, the bin labels and enters the quantity. Connect the unit to the PC, transfer the data, and let FasTrack do the rest!

Auveco's FasTrack for Windows software is offered only through qualified Auto Vehicle Parts Company distributors. If you are interested in purchasing FasTrack for your operation, contact your local Au-ve-co distributor. For a distributor in your area call customer service @ 1-800-354-9816 extension #1.
